

HEALTHY CITIES GENERATOR

Helping urban planners assess and prioritise health

The Healthy Cities Generator is a decision-support tool that helps assess the health impact of urban interventions. HORUS contributed to the platform through the development of its Citizen Engagement module.

WHAT DOES IT BRING YOU?

The tool helps prioritise health investments, secure funding, and assess project health impacts.

Urban health
impact
assessment

Quantify annual
health savings

Policy
alignment for
health and
sustainability

WHO IS IT FOR?

Public
Institutions

Private
Organisations

Research
Teams

HOW DOES IT WORK?

1

Baseline Analysis

Assess neighbourhood conditions and identify health-focused planning priorities.

2

Impact Assessment

Estimate the health impact of your plan and adjust urban strategies to improve health indicators.

3

Economic Savings

See how much your urban plan could save on health each year and the impact per person.

4

Citizen Engagement

Bring community voices into your work to bridge data and dialogue.

IMPACT

Better Data, Healthier Cities,
Stronger Communities

By combining individual health monitoring with evidence-based urban planning, these tools provide insights that support healthier lifestyles, informed decision-making and more sustainable urban environments.
